

# HOOK, LINE & SINKER

The tricks hackers use to try to get your personal information and how to avoid it.

## Common Phishing Tactics

Phishing happens when you get an email from what looks like a trusted source (such as Northwestern or your bank) asking for personal information.

Messages are often urgent or threatening

You may be asked to click a link or open an attachment to verify information

Graphics, URLs, and signatures often look legitimate

## What to Do if You Suspect Phishing

The “phishing” lure may look convincing, but don’t take the bait

Don't open attachments or click email links unless you know they are legitimate

Check for odd sender email addresses or misspellings

Search for the real website online and confirm its address
